

Husqvarna®

A top-down view of a large industrial floor polishing machine. The machine has several large, circular, orange-colored abrasive pads arranged in a circular pattern. The machine is in motion, as indicated by the blurred background and the motion blur on the pads. The floor being polished is a dark, textured concrete.

**INDUSTRIAL CONCRETE
FLOOR POLISHING
AT HIPERTROWEL™ SPEED**

HIPERTROWEL™ FLOOR POLISHING SYSTEM BY HUSQVARNA

FOR A BETTER WAY OF WORKING

HIPERTROWEL™ – FAST POLISHING OF LARGE CONCRETE FLOORS

As a specialist in polishing concrete floors, you sometimes need a faster polishing method than using a planetary floor grinder. Especially when you're dealing with a really large, unobstructed area, where the surface flatness is already sufficient.

The Husqvarna Hipertrowel™ system is exactly the solution you're looking for. We combine our expertise in concrete floor polishing, our superior diamond tools and advanced driver technology for trowels to create a functional polished concrete floor obtained at the speed of ride-on trowel finishing.

UP

PER

HIPERTROWEL™

Husqvarna®

Production rates can vary significantly depending on the process chosen and the end-result you want to achieve. Also, size of the floor, concrete quality and hardness as well as obstacles on the floor impact productivity.

WHAT TYPE OF PROJECTS ARE SUITABLE?

The Hipertrowel™ method is ideal for industrial floors from 500 m² and up. Both newly poured slabs and older, pre-existing floors can be processed with the Hipertrowel™ system.

HIPERTROWEL™ IS THE IDEAL SOLUTION WHEN

- Time is the most critical parameter
- The surface is 500 m² or more
- There are no obstacles (pillars etc.)
- The floor does not need to be levelled
- No aggregate needs to be exposed
- Wet grinding is not an issue
- A good slurry management system is on site

WHAT END-RESULT CAN YOU PRODUCE?

The Hipertrowel™ system allows you to produce a nicely salt and pepper-looking floor with a satin or glossy finish.

BEFORE:

Trowelled concrete surface

AFTER:

Glossy salt and pepper surface

**FAST INDUSTRIAL
CONCRETE POLISHING**

IT'S FAST AND EASY TO POLISH LARGE CONCRETE FLOORS WITH THE HIPERTROWEL™ SYSTEM

HOW DOES IT WORK?

The Hipertrowel™ method is a wet polishing process in six steps (#30G – #600G), and three optional final steps (#800G – #3000G). Depending on the conditions of the floor, initial grinding and grouting with a planetary grinder might be recommended.

TOOLS AND EQUIPMENT

Your Husqvarna retailer will provide you with a complete setup of Hiperflex TRW tool pads, chemicals, Hipertrowel™ gyro drivers and power trowel attachments. You'll also need a ride-on power trowel, a squeegee vacuum to collect the slurry and a water hose connected to a tap. For maintenance, we highly recommend the Husqvarna Hiperclean pad.

- Additional grit sizes are available
- To optimize the result, polish with a Hiperclean TRW pad as a final step
- For extra stain protection add Hiperguard™

PROVIDED BY HUSQVARNA

Hiperflex TRW tool pads

Hipertrowel™ gyro drivers

Hipertrowel™ attachments A, B or C for your ride-on trowel

Hiperhard™ and Hiperguard™ chemicals

W70 P

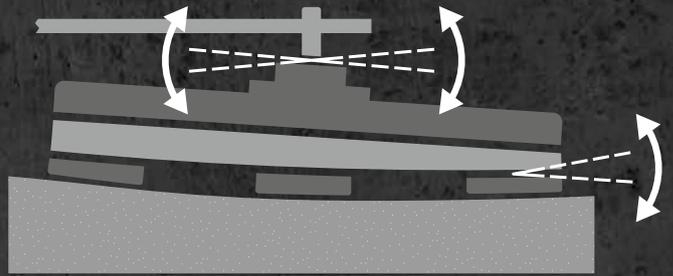

YOU'LL ALSO NEED

- Ride-on power trowel, 36 or 48 inch
- Pressurized water tap
- Slurry disposal solution
- Wall protection plastic cover
- Autoscrubber

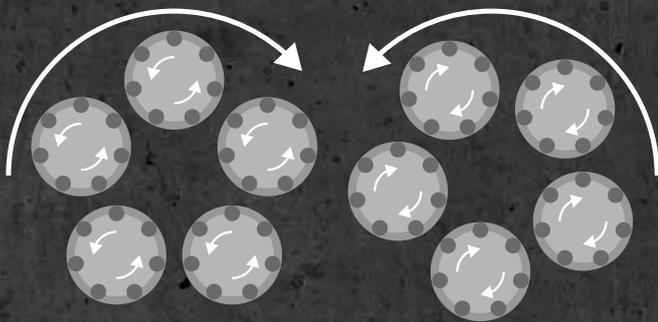

FLEXIBLE GYRO DRIVER TECHNOLOGY FOR EXCELLENT RESULTS

All parts in the Hipertrowel™ system are interacting to secure that the whole floor is evenly polished by the diamond tools at each passage of the machine to create a homogenous finish of the floor.

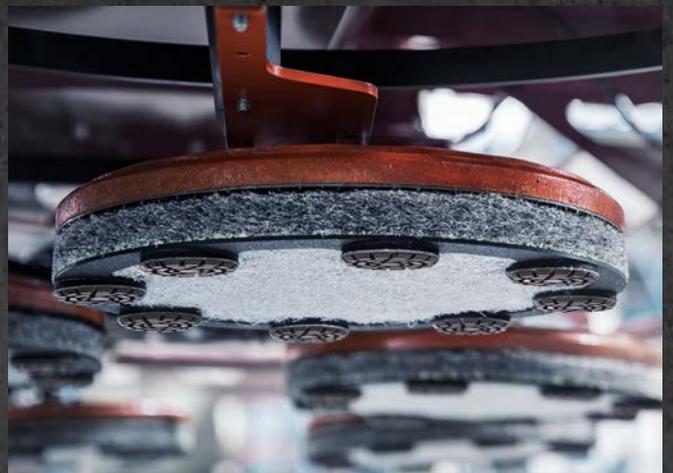

MAXIMUM FLEXIBILITY

Both the Hipertrowel™ gyro driver and Hiperflex TRW tool pads are designed for maximum flexibility in all directions. This allows the diamond tool pucks to follow the floor surface in the high and low spots and create a homogenous salt and pepper finish.

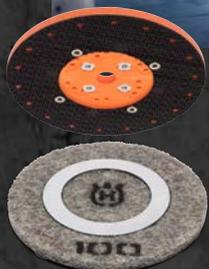

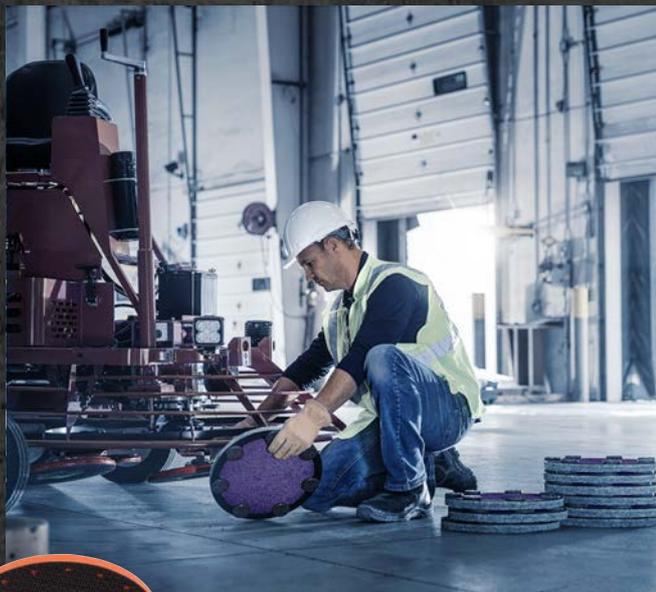

MULTI-ORBITAL ROTATION

The Hipertrowel™ gyro driver has a floating bearing mount that allows it to rotate independently of the trowel rotor. This solution enables a more efficient polishing process with a more consistent scratch pattern.

EVEN TOOL WEAR

The flexible polymer backing ring adjusts to unevenness of a floor and ensures an even wear on the pucks and ultimately a longer life of the tooling.

HASSLE-FREE MAGNETIC MOUNT

The Hiperflex TRW tool pads are easy to mount securely underneath the Hipertrowel™ gyro drivers due to strong magnets connecting the pads to the driver.

OPTIMIZED TOOL DESIGN

The proven technology of the renowned Hiperflex tools has been further developed to fit the demands of a ride-on power trowel. For example, the number and position of the pucks are calculated to ensure optimal results and maximize tool life.

THE EXPERTS IN CONCRETE SURFACES AND FLOORS

Together with partners and contractors in the flooring industry, we are committed to developing polished concrete as a preferred flooring option. By further broadening our polishing offering, now even including the Hipertrowel™ system, we create more attractive alternatives for ever more great polished concrete flooring projects.

APPLICATION KNOWLEDGE AND SUPPORT YOU CAN COUNT ON

Thanks to our extensive sales and service network, we are never far away when you need to consult a Husqvarna-trained floor polishing specialist or have any diamond tools or equipment delivered.
